Title: *Quality of Care Indicators for Overactive Bladder Symptoms*

Role: Principal Investigator/Mentee

This project involves the development and pilot testing of candidate quality indicators for women with overactive bladder symptoms. The research includes systematic literature reviews, patient focus groups, physician expert interviews, an expert panel to rate the candidate indicators, and pilot testing the candidate indicators to rate their feasibility.

National Institute of Biomedical Imaging and Bioengineering (NIBIB) Recovery Act 2009-2011
Limited Competition: NIH Challenge Grant 1 RC1 EB010649-01
\$1,000,000

Title: *Abdominal Colpopexy: Comparison of Endoscopic Surgical Strategies (ACCESS)*

Role: Principal Investigator

This is a multiple PI randomized clinical trial to be performed at UCLA with co-Principal Investigators Elizabeth Mueller and Kimberly Kenton at Loyola University Medical Center in Chicago. Patients will be randomized to undergo laparoscopic vs. robotic approaches to sacrocolpopexy for vaginal prolapse. Outcomes will be compared with respect to costs, convalescence, return to normal activities, post-operative pain, complications, and wound appearance.

NIDDK's Urologic Diseases in America Project Selected Collaborative Analyses 2008-2012

Funding for data analysis provided

Title: *Trends in the Use of Sacral Neuromodulation in the United States*

Role: Co-Investigator

In this collaborative study between UCLA and the University of Michigan, we analyzed claims data from Medicare and Ingenix to determine trends in the use of sacral neuromodulation for various voiding disorders in the US.

Title: *Volume Outcomes in Incontinence Surgery*

This study involved the use of Medicare claims data to determine whether provider variables, such as surgeon volume and specialty, are associated with short-term outcomes after pubovaginal sling surgery among female Medicare beneficiaries with stress urinary incontinence. We also analyzed the independent effects of patient age, patient race, and the use of pre-operative urodynamics testing on outcomes of sling surgery.

Title: *Ejaculatory profiles and sexual function in men undergoing posterior urethral Reconstruction*

Using the International Index of Erectile Function questionnaire and semen analyses, we evaluated sexual function and fertility in men after urethroplasty for urethral distraction defects occurring at the time of pelvic fracture injuries.
